Skills

C | C++ | Dart | Kotlin | Android SDK | Android Studio | UI/UX | OOP | Flutter | Cross-Platform | MVVM | Agile Methodology | Git version control | CI/CD | Testing | Security | API Integration | Work manager notification | Retrofit | Database Management (SQLite, Firebase) | Flutter Framework | Widgets | State Management | Flutter DevTools | Coroutines | Clean Architecture

Work Experience

Nagorik Technologies Ltd, Mirpur DOHS

Feb 2025 - Present

Software Engineer II

- Spearheaded the end-to-end development of multiple mobile applications (10+ projects), driving innovation from concept to deployment with a strong focus on performance, scalability, and maintainability.
- Modernized several legacy systems by migrating them to the latest technology stacks, resulting in enhanced app stability, reduced crash rates, and improved development efficiency.
- Engineered secure integrations for both local and international payment gateways, ensuring seamless and compliant financial transactions across diverse user bases.
- Championed code quality through structured reviews, modular architecture, and adherence to best development practices, fostering consistency across large-scale projects.

Nexdecade Technology Pvt Ltd, Dhaka

Aug 2023 - Jan 2025

Android Developer

- Developed a VTS application from scratch and successfully launched it, surpassing the previous version with improved performance and dynamic features.
- Collaborated closely with product teams and designers to create a user-friendly interface, resulting in a 15% increase in user satisfaction scores.
- Engineered advanced customer segmentation strategies using various graphical representations, enabling users to effectively access and analyze the information they need.
- Integrated multiple third-party services into the application, significantly enhancing user experience and increasing customer engagement by 30% over four months.
- Implemented meaningful material design, alerting systems, and rigorous manual testing, while maintaining continuous development for production-ready applications. Ensured all project requirements were met through regular meetings with stakeholders and fostering a transparent development process.

Dynamic Megasoft Limited, Dhaka

Sep 2022 - Jul 2023

Software Developer

- Developed a seamless data retrieval system using Retrofit, LiveData, and Coroutines in a multi-module application architecture, enabling faster data operations such as deletion, updates, and fetching.
- Designed and implemented an in-house NGO management system, tailored to streamline and automate their operations.
- Optimized application performance for various device screen sizes and orientations, ensuring a consistent and responsive user experience across different platforms.

Education

Daffodil International University

May 2018 - Jun 2022

BSc. in Computer Science and Engineering

CGPA: 3.54/4

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Developing Android App, Applied Statistics

Project Work

- **DailyCal AI – Track Your Bites:** Built an AI-powered fitness app that analyzes food images to calculate nutrition intake and deliver personalized diet insights. Includes progress analytics, smart notifications, and local/international payment integration using Flutter, GetX, and Clean Architecture.
- **Jeeto – Competitive Quiz Platform:** Engaging quiz application with 500K+ downloads, offering quizzes across 30+ categories and 250+ topics. Features daily live quizzes, monthly mega tournaments, and friend challenges with attractive prizes. Cross-platform Flutter app built with Clean Architecture for scalability, reliability, and high performance.
- **Deal Finder – Best Deals Across Bangladesh:** Smart consumer platform with 10K+ users, offering nationwide deals in travel, fashion, electronics, and lifestyle. Integrated bKash (MFS) and Robi (telco) services and built on Clean Architecture for a seamless, scalable experience.
- **GP VTS - Vehicle Tracking System:** Built from scratch and developed a leading vehicle tracking system in Bangladesh with over 500K+ downloads. The app provides real-time tracking, a customizable dashboard, advanced analytics, and multi-vehicle management capabilities, all from a single interface. Built using Flutter, leveraging SOLID principles and Riverpod for state management to ensure performance and scalability.
- **M2M Vehicle Tracker:** Engineered a comprehensive vehicle tracking solution with features like live tracking, detailed vehicle and driver insights, and customizable reporting (speed, distance, expenses, etc.). The app supports various user types and allows efficient management of multiple vehicles. Developed with Flutter, utilizing SOLID principles and Riverpod to deliver a responsive and user-friendly experience.
- **NGO Management System:** Developed a comprehensive management application from scratch for NGOs, featuring tools for managing branches, customers, loans, installments, withdrawals, and employees. Built using Android technologies including Fragments, REST API with Retrofit, MVVM architecture, Data Binding, LiveData, Shared Preferences, Coroutines, and Material Design, ensuring a responsive and efficient user experience.

Personal Projects

- **RapidRide:** Developed a full-stack app like Uber using Flutter, with separate driver and user apps. Features include real-time ride requests, trip tracking, earnings overview, and Google Maps APIs integration. Implemented push notifications and an admin web panel for managing users and drivers, with the ability to block users for misconduct.
- **Foody:** Developed an Android app using Kotlin, implementing MVVM architecture for clean code and scalability. Features include recipe filtering by meal and diet, favorites marking, and offline functionality. Integrated ROOM Database, Retrofit, DataStore Preferences, and Android Architecture Components. Enhanced user experience with dark/light themes, modern UI components, and Motion Layout for smooth navigation.

Awards and Certificates

- **Academic Excellence Waiver:** Awarded a 50% tuition waiver for outstanding academic performance, consistently maintained every semester by achieving the required target CGPA.
- **Mobile Application Development:** Earned a certification from the Skills for Employment Investment Program (SEIP) in Bangladesh, recognizing proficiency in mobile app development skills and techniques.
